

## Using the JMP Virtual Lab with this Course

To complete the practices in this course, you can use JMP in a Virtual Lab. The data you'll use throughout the course data is automatically loaded into the JMP Virtual Lab. You access the JMP Virtual Lab using the block on the right side of the lab page.

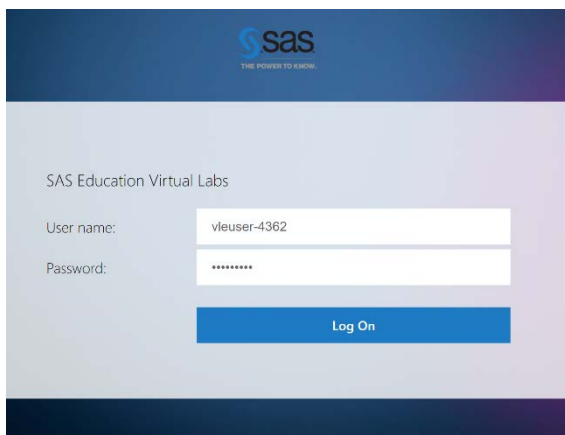

1. The first time you access the virtual lab, click **Create User**. This creates a lab for you and loads the data for the course.

2. To open the Virtual Lab, click **Launch Virtual Lab** in the block on the right side of the main course page. If you ever have a problem with the data, you can click **Refresh Your Data** to reload the data folder in the virtual lab.

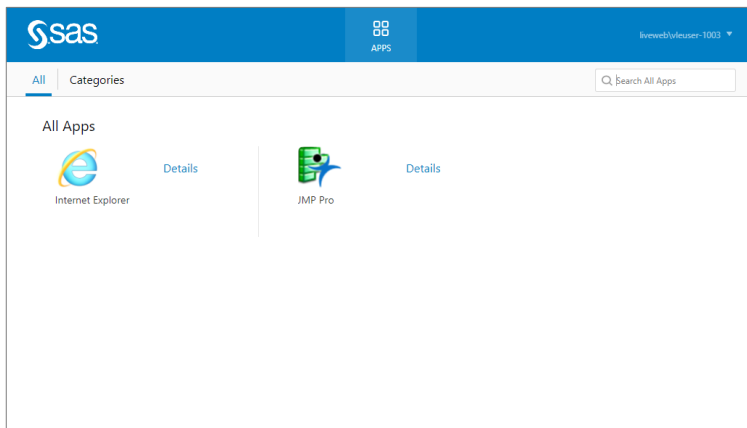

The SAS Education Virtual Labs window opens with the **User name** and **Password** fields already filled in for you. Do not change these values.

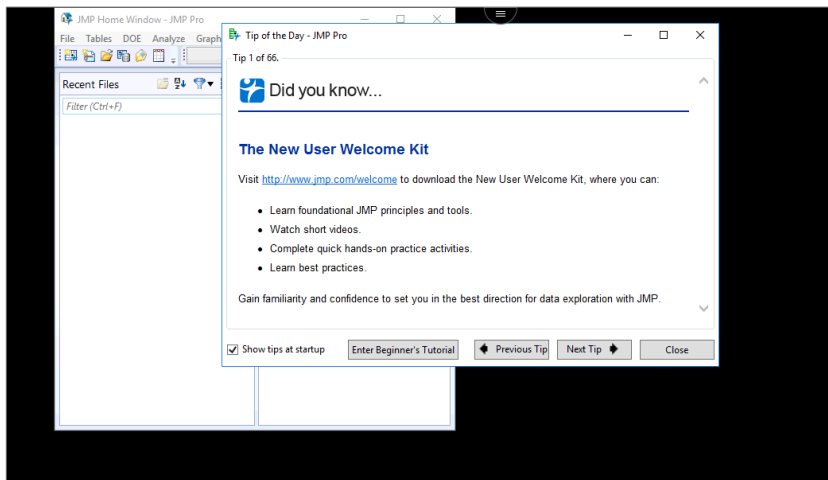

3. Click **Log On**.

The APPS window is displayed.

4. Click the **JMP Pro** icon.

JMP Pro and the JMP Tip of the Day are displayed in a new browser tab.

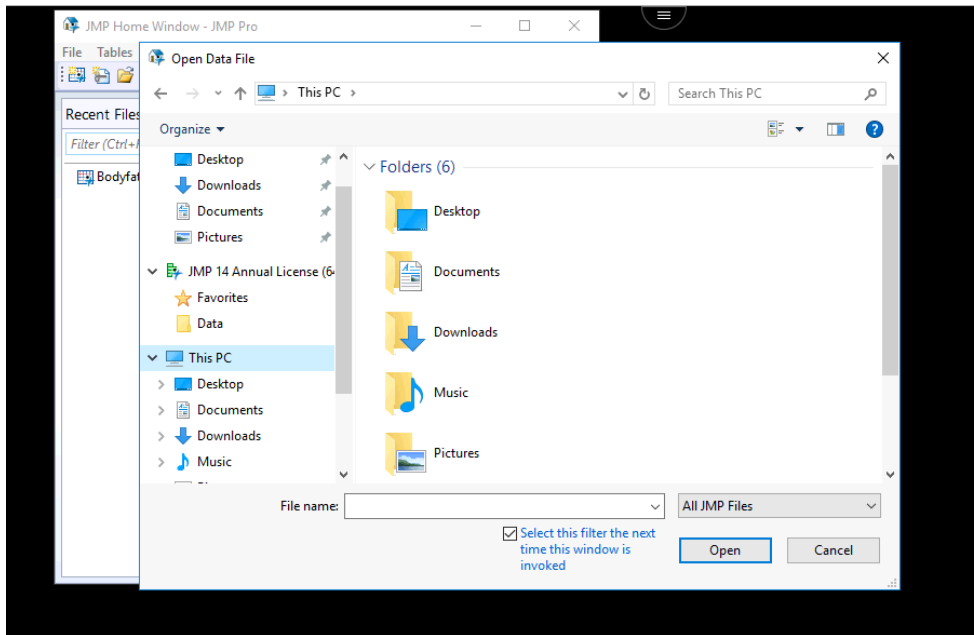

5. Click **Close** in the Tip of the Day window.

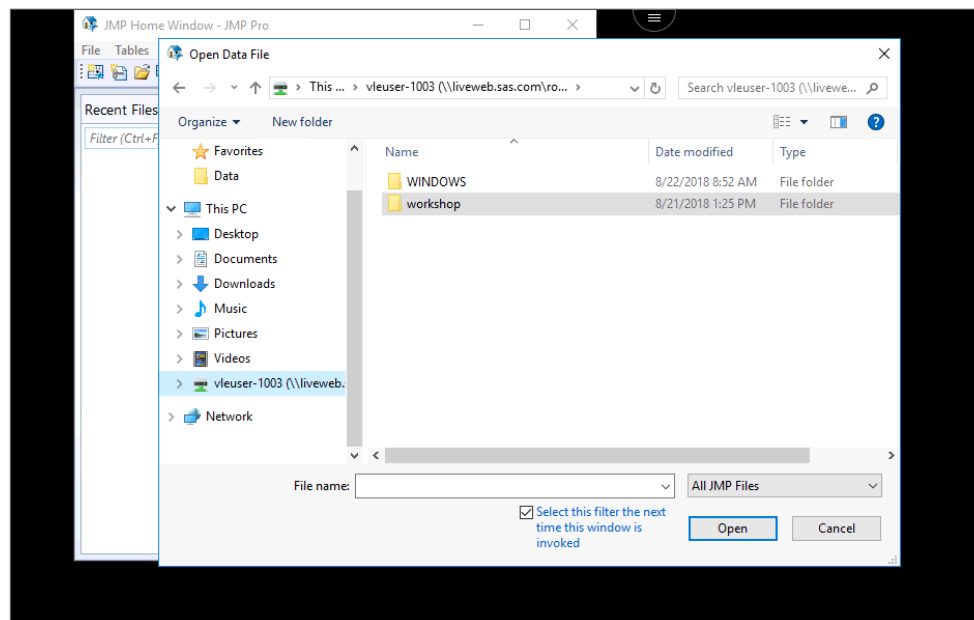

Note: If you prefer not to see tips, you can clear the **Show tips at startup** box before you close the window.

6. To access practice files, select **Open** from the **File** menu.

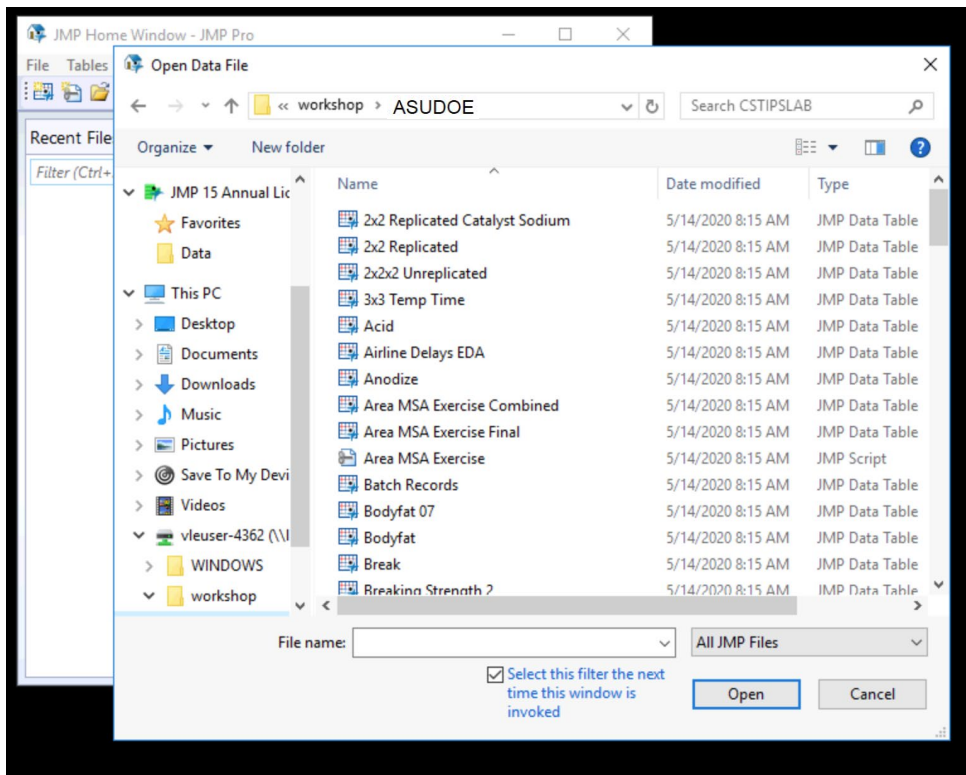

The Open Data File window opens.

7. In the navigation panel on the left, expand **This PC** and select the **veuser** drive.

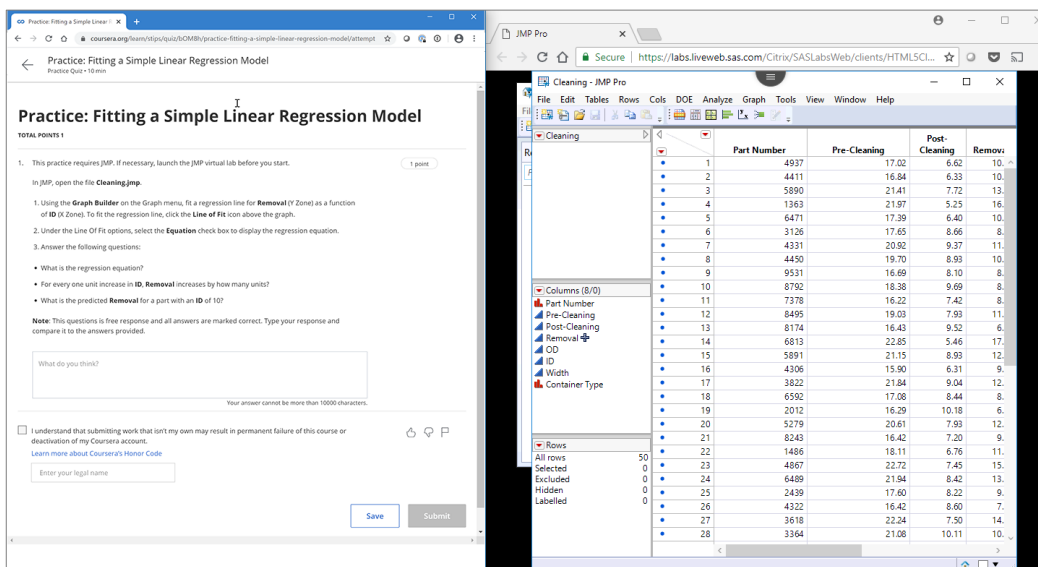

8. Open the **workshop** folder and then the **ASUDOE** folder. This folder contains the files you will use in this course.

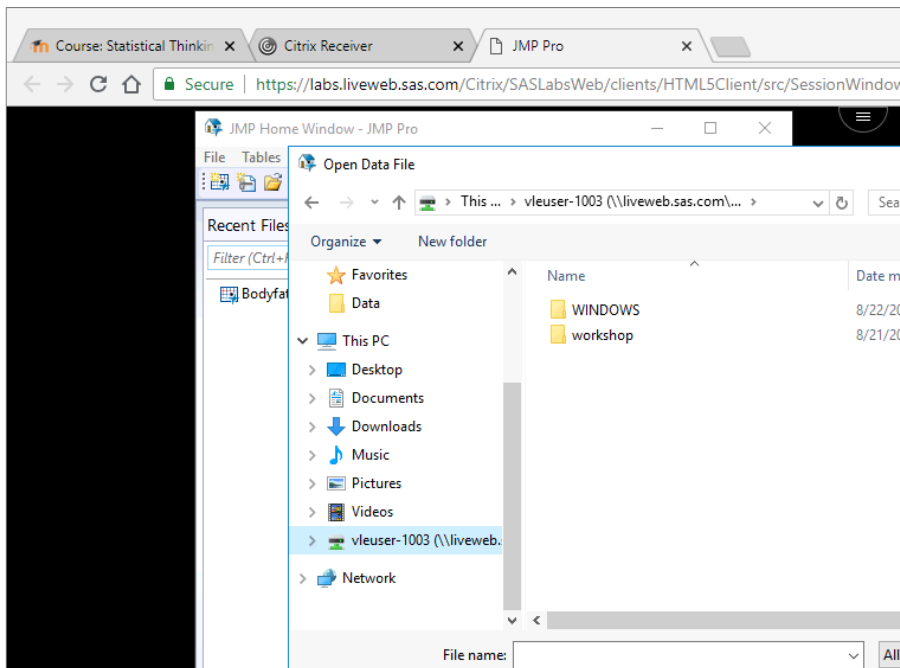

You're now ready to use JMP!

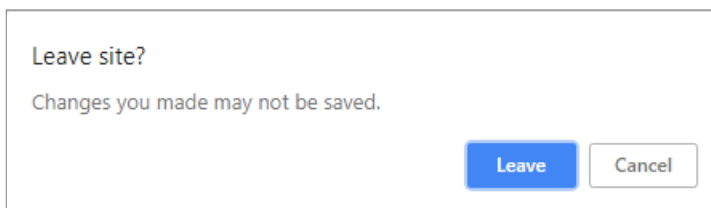

**Note:** To complete the practices, you can toggle back and forth between this browser tab and the practice window. Alternatively, you can arrange the windows side by side on your monitor, as shown below.

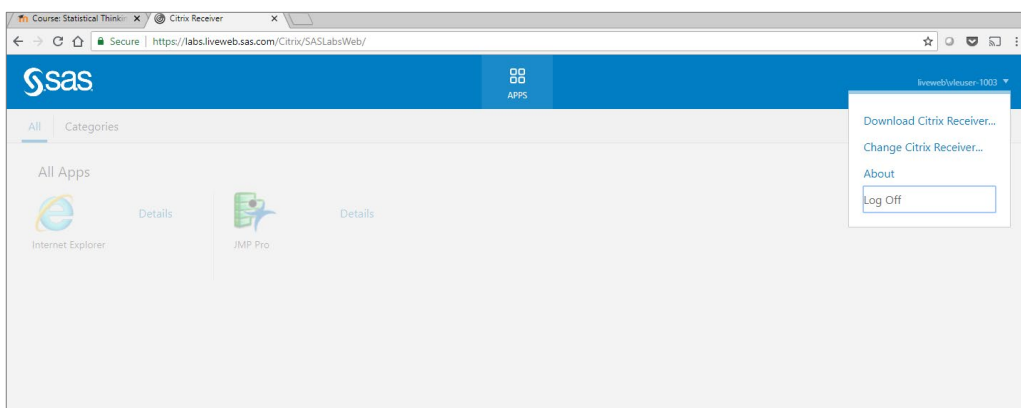

9. To exit the Virtual Lab, first close the browser window by clicking the **X** on the tab.

10. Click **Leave** to confirm that you want to close the virtual lab.

11. Select **Log Off** in the APPS window.

12. Finally, close this browser window by clicking the **X** on the Citrix Receiver tab.
